Introduction

X3 is about style and simplicity. A unique concept intelligently designed that is functional, easily installed and reconfigured. Aimed at Designers and Facility Manager, X3 is a furniture system that responds to needs, giving you the level of features you require now, with the option of adding on later. A system you can confidently build onto to suit changing conditions. It is designed and engineered with emphasis placed on quality, interchangeable parts and a high level of detailing.

The strategy behind the design of X3 was to bridge the vast gap between dated, monolithic panel systems and highly complex fully tiled systems. X3's panels are built up with individual tile elements which simply slide in from the top allowing you the choice of combining colours and finishes. Slide-in elements are not restricted to tiles. Cable management channels can be positioned at two height options, to suit your particular power and data needs. Since the tiles and cable channels have standard height increments, reconfiguring is simple.

X3 will provide a lasting solution

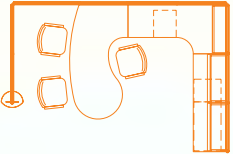

Designed by Bruce High

Manager

A good manager looks to establish a good balance between privacy and communication. He understands the importance of having a space which allows him to work in an efficient and effective manner both individually and together with his team.

Ergonomic main and side tables let him move comfortably around, with quick access to cabinets and other items on shelves. Veneer tiles provide a certain level of privacy for sensitive work, while clear glaze tiles keep the area visually light and sleek.

- Worktops + Storage + Panels
- RC Veneer Sycamore
- Panel Fabric
- YB107 Oyster
- Frame
- Natural Anodized Aluminum
- Glaze Tile
- Clear Acrylic

Right

Subtle privacy and a contemporary look are cleverly created with veneer tile and clear acrylic tile.

Below

Veneer finish worktop with steel modesty panel adds an element of style.

Polymethyl-methacrylate.
Thermoplastic, optically transparent
with a refractive index of 1.492m.
Excellent resistance to dilute acid,
detergent, cleaners and dilute inorganic
acids.

Composite reconstituted wood veneers
feature guaranteed colour and grain
consistency.

Manager + Team 90°

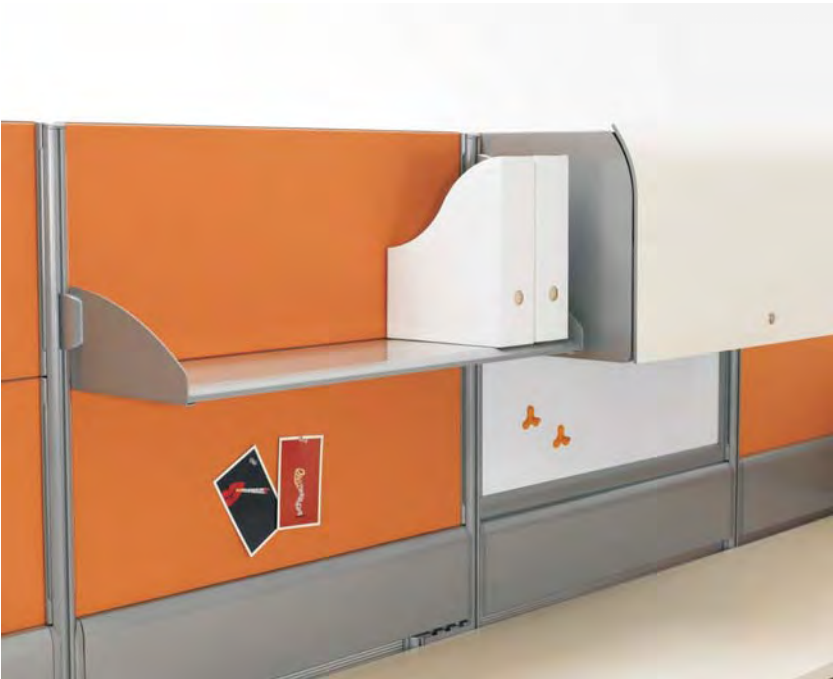

Team members appreciate a practical space that help them organize their daily tasks. With the Team 90degrees Workstation configuration, even a small office can be optimally utilized. This open style encourages interaction among team members. Each member can modify their space with useful add-ons such as a flipper bin, shelves, and under table open shelf cabinet. These accessories free up precious desk space for the user. Low partition offer each member adequate privacy while keeping communication channels open.

- Worktops + Storage

Top
Open shelf keeps desk cluster-free, pin-able board tile comes in handy for notes.

Bottom
An X2 Full Height clip-on screen increases privacy.
Stylish X2 T-leg with worktop marries to the X3 panel perfectly.

Fabric is flame resistant base on BS476 part 7 class 1.

Striped polycarbonate screen is virtually unbreakable with strength 250 times stronger than glass.

30mm thick melamine faced chipboard, resistance to scratching and abrasion.

Manager + Team 120°

A functional and aesthetic solution, the Team 120degrees workstation offers a modern and roomy alternative to the cubicle lifestyle. The open office concept reduce visual weight yet each team member can still enjoy control over their space. Fabric or striped polycarbonate glaze panels help soften the overall look.

Membrane Pressed Top can create profile that is more comfortable to the user. Creative use of space is achieved with lighting attached to the panel. X3's curved panel complement the curves of the worksurfaces while providing sufficient privacy.

Left Top
Multi-purpose hook is ideal for hanging a bag or jacket.

Left Bottom
Uplighter provides excellent lighting.

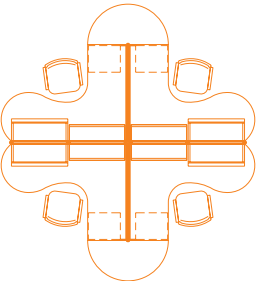

Below
Convenient magnetic whiteboard is great for reminders.
Side table and storage cabinet keep clutter off the desk.

Often team members come together to brainstorm and discuss ideas. Easy access to each other builds rapport, encourages interaction and fosters creativity among members. This configuration allows a member to work independently or have a quick discussion using mobile end table. X3 comes in new anodized finish for a contemporary look. Glazed tiles can go up to 1.5m yet offers a visually light solution with its clean lines. Curved worktops makes the work space more interesting visually. For table support, either a straight leg or a pedestal can be used instead of a support gable.

Left

Curve door flipper bin with hydraulic door system reveals ample storage space and keeps file out of sight.

Right

12mm compact laminate worktop offers visual lightness. Panel can be specified without lower tiles, saving on cost and improving air circulation.

Gas-lift can last 45,000 cycles, maintenance free with very long life.

12mm thick compact laminate, waterproof, chemical resistant and no staining by 18 specified reagents.

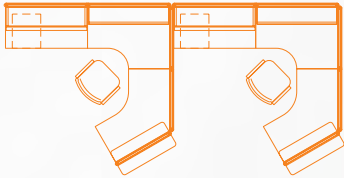

Power sockets and data outlets can be configured up to 4 gangs with choices of international outlet modules.

Teamwork 90+120°

Teams that need larger workspace will appreciate the flexible solution of combining the 120degrees configurations. With multiple facilities available, everything they need is still within easy reach and they enjoy greater control over their space. Flipper bins which provide storage, also help break up a flat horizon. Shelves and keyboard trays mounted beneath the tables are perfectly out of sight when not needed. With the new support gables and clip-on laminated glass screens, this large workstation still remains visually light and pleasing to the eye.

- Worktops + Storage
- 3995 Ivory
- Panel Fabric
- (4301) 142 Tangerine
- Frame
- Natural Anodized Aluminum
- Clip-on Screen
- Laminated Glass Whiteboard

6.38mm chemical etched finish glass.

3mm thick plasticized aluminum compound board material is light, colourful, smooth, anti-corrosive, fire-proof, and easy to clean.

Natural Anodized Aluminum Extrusions are 100% recyclable, high corrosion resistant, and anodized up to 10 microns. Material is high in strength and low in density.

Left Top

Unique clip-on glass screen with chemical etched finish doubles as a white board.

Left Centre

Ergonomically designed sliding keyboard tray. Available in black and grey colors.

Left Bottom

Convenient counter top welcomes interaction and keeps in-trays off the main desk. Support gable with perforated aluminum board offers good stability.

1.5mm thick sheet steel carcass, powder coated to a thickness of no less than 50 microns for increased durability, scratch and chemical resistance.

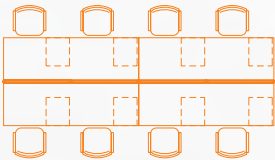

Accessory rails allows for trays to be placed at varying heights. An open shelf mounted under the table offers extra storage area and keeps clutter off the desk.

Teamwork Long Bench

For a linear set-up, the X3 long bench concept is the ideal solution. With its clean lines and basic functionality, expanding or reducing the length of this configuration can be done very quickly.

Worktops + Storage
325 Maple
Frame
Natural Anodized Aluminum
Translucent Tile
White Acrylic

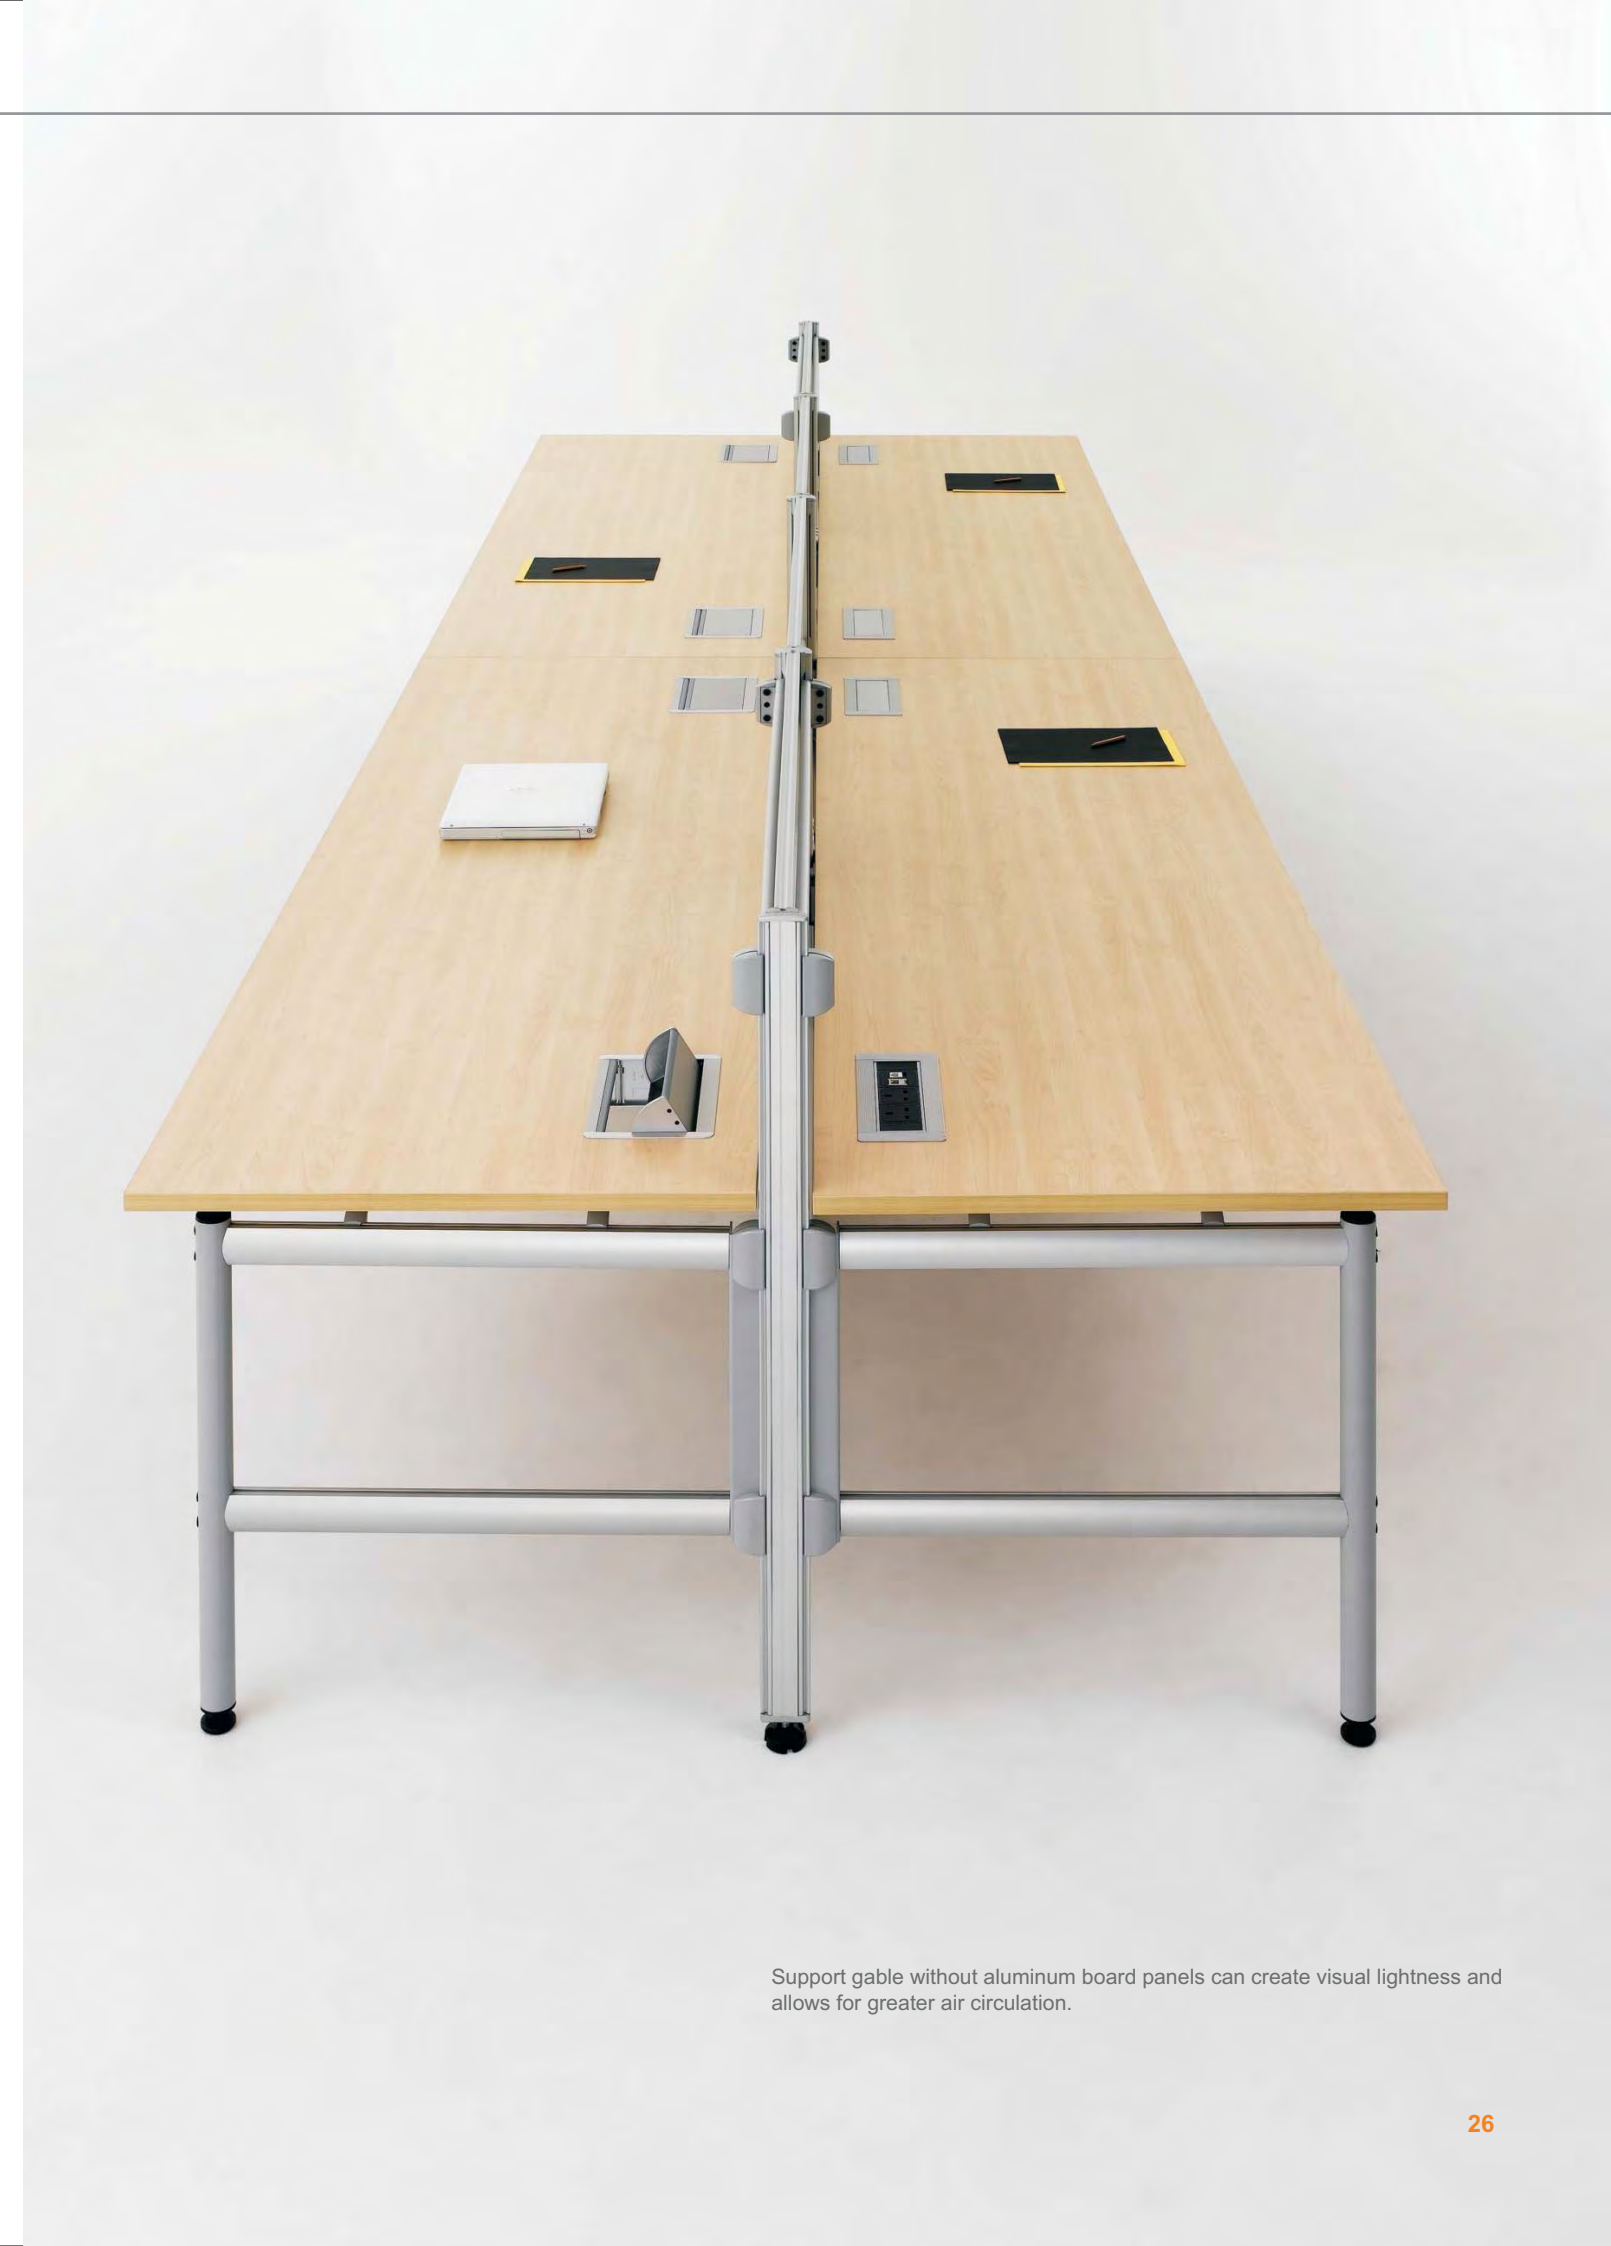

Top

Translucent acrylic tiles serve as user-friendly screens as they allow light in while offering some privacy. Flip-up power sockets allow wires to be neatly concealed when the flap is closed.

Bottom

Clamp-on accessory rail can be conveniently mounted using the X3 universal clamp.

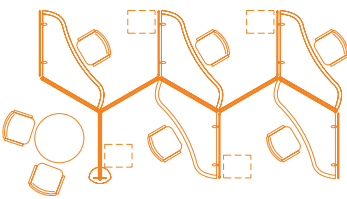

Teamwork 120°

Team members who need greater amount of privacy and storage space will benefit greatly from this X3 120degrees configuration. Here, members will have enough space to work on and also enjoy additional storage facilities such as shelves

and cabinets all within reach. Besides affording privacy, X3 panel with whiteboard tile is useful for jotting down important information and reminders. X2 clip-on screen with integral accessory rails allows CD, stationary and phone holders

to be close at hand but out of your way. A convenient meeting area can be quickly set up at the available space too.

Membrane pressed technology enables worktops to have compound curves.

Left

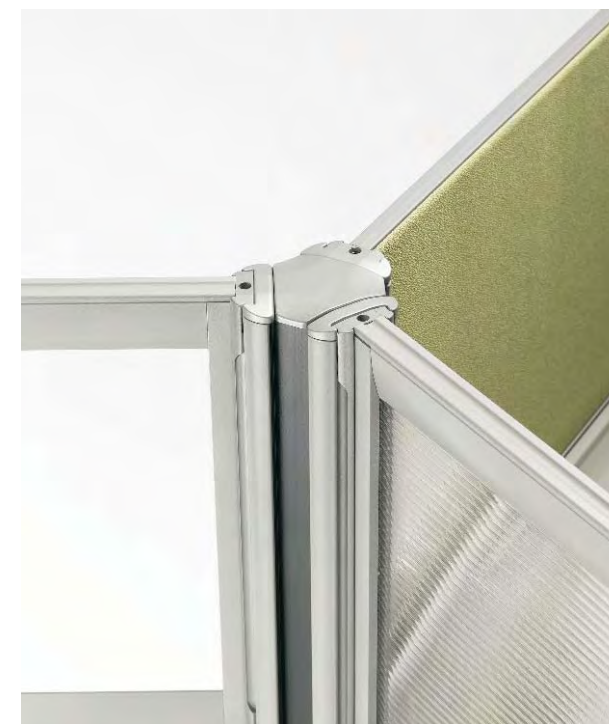

A workstation converts instantly to a meeting area with X2 round mobile table.

Right

The 120 degrees connector forms the central pole. For each workstation, a choice of fabric tiles, fluted polycarbonate glaze tiles, or white board tiles offer great flexibility.

Below

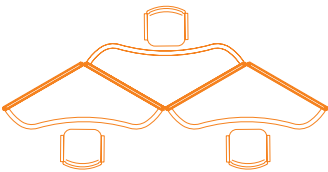

Vertical cable helps to transfer power and data cables from floor to horizontal cable channel.

Hot Desking 120°

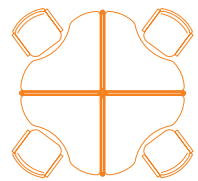

Space-saving yet functional, hot desking has become an increasingly important feature. Non-office based staff such as sales executives and freelancers share workstations. The X3 system readily avails power and data lines through a belt line. Set up in small clusters, the on-the-go user simply chooses an available desk for the hour or day to complete their work.

Hot Desking 90°

Diverse configuration for hot desking help call centers to organize staff in an effective manner. With the 90degrees workstations, power cables are routed through a vertical central channel. Workspace is kept cluster free. Curved worktops offer comfortable seating arrangement, complimented by curved coloured tiles to complete the look.

Translucent acrylic clip-on screen provides colour without the heavy partition look.

6mm thick translucent acrylic available in 3 colours.

Power sockets can be neatly located on the tabletop for more convenient access.

Freestanding Wall

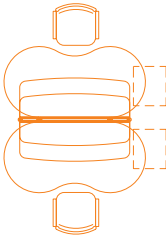

Create more privacy with a freestanding wall panel. Easy to install, this stand-alone unit is also cost effective as there is no need to construct physical walls. Its height affords

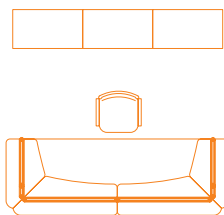

more space to affix shelves and tray for storage. The freestanding wall is ideal of senior managers or for executives who are involved with sensitive work.

- Top**
Add-ons are easy with the accessory rail. Power socket can be placed above eye level and away from desk.
- Centre**
Name plate or department sign can be affixed to top of striped polycarbonate screen.
- Bottom**
Mobile table can be wheeled to face preferred direction and locked into position.

Reception

The first point of contact for visitors, the reception area has arisen in importance in creating a lasting impression of an organization. The X3 system allows for a seamless look throughout the office beginning with the modern design of the

reception desk. Translucent acrylic tiles allows light through while maintaining privacy. Perforated aluminum board tiles are added to project a corporate look.

6mm thick plasticized aluminum compound board with aluminum frame.
Standard colours available in metallic black and off-white.

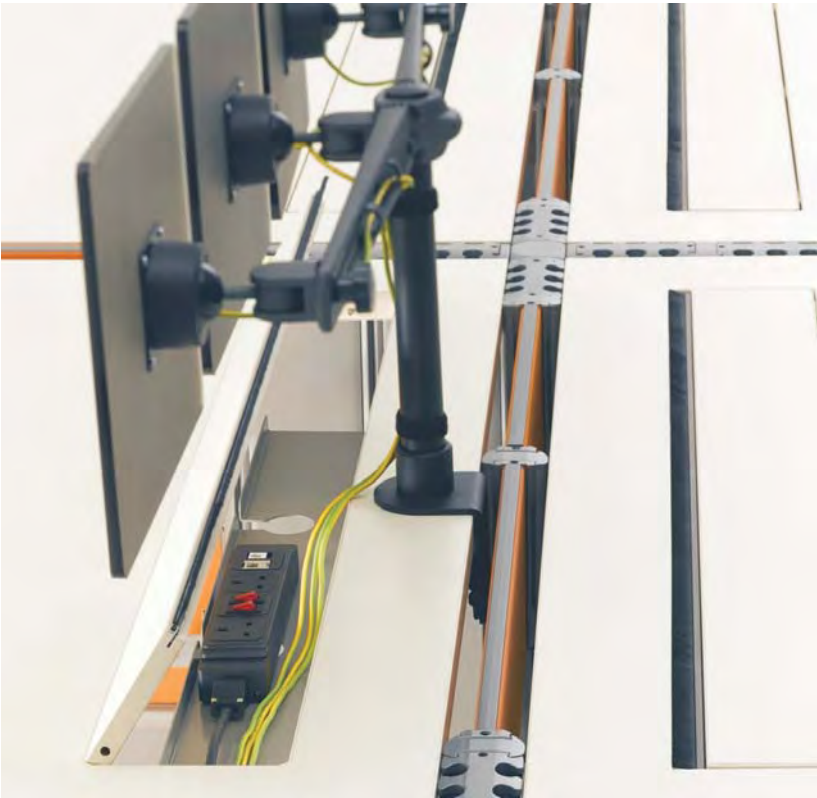

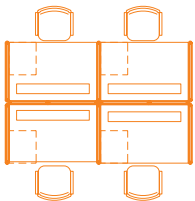

Dealing Desk

When vital information needs to be readily available, the trading desk configuration is the smart solution. It can accommodate up to 6 LCD screens so you can quickly access data all in one place. With its generous cable channels

located behind the desk, wire management is simple and organized. This unique configuration is ideal for companies in the broadcasting and trading industries.

Top
Cable are cleverly tucked away and routed to the power socket on the wire tray under the worktop. A trap door with hinge for easy cable access.

Top

Sturdy LCD arm can hold 3 LCD screens in a row or up to 6 LCD screens in total.

Bottom

Vertical cable channel can be added to carry more wires and to separate data from power cables.

Below

Convenient grip holes make wire maintenance hassle-free as desk backing can be easily removed when needed.

Cable Management

The need for connectivity and speed is essential in every office. Technological infrastructure should empower and not hinder users. With that in mind, effective cable management is necessary as it keeps cables from computers, LCD screens, telephones, facsimiles, neatly and safely tucked away. With the practical X3 system, cabling capabilities meet both function and aesthetic needs.

The patented design horizontal and vertical cable channels separate various wires into manageable combinations and away from direct human contact. The advantages of slide-in cable channel are its quick installation, safety feature, and capacity for unlimited networking and painless expansion. In addition, power sockets can be adjusted to varying heights to suit the user's needs.

X3's unique patented slide-in cable management system gives the choice of optional configurations for the cable management channels:

Skirting Position

Suitable for the corridor and cubicle types of layouts, allowing the cables to agree at any position along the width of the panels.

Belt Line Position

This will give convenient access to power and data outlets above work surface height, eliminating the awkwardness of locating available points below the workstation.

Vertical Trunkings

Can provide routing for a large volume of cables between skirting level and belt line level, as well as a cable route from the ceiling. This is particularly beneficial when used within a cluster of workstations. They can be either an integral part of a panel as shown here on the right, or as an individual vertical trunking which can be attached at the end of the a panel.

Cables can be routed up between the 2-way and 3-way connectors, accessible by removing the trim covers.

Access

With other tile systems, it is necessary to remove work tops in order to undertake re-cabling work. An advanced feature of X3, is the ability to access all the cable channels and trunking covers whilst the workstation remains intact. This reduces down time to the minimum.

X3 will also be able to feed cables down from the ceiling and into the workstation below. Access to the cables is through removable covers on both sides of the ceiling trunking.

Power and data outlets can be positioned either inside the cable channel or attached flush on the outside of the hinged cable channel covers. Plastics cable managers can be positioned to hold the cable taut and segregated.

The cover flips up and will hold itself in an open position while accessing within the cable channel.

Understanding the code structure of a finished panel

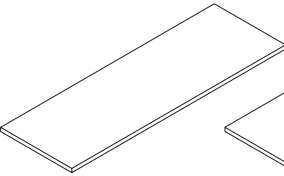

The code is structured starting from the floor level up to the top tile.

Example:

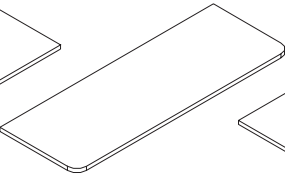

All product codes stated are in Nickel Mica finish.
For Natural Anodized finish, add ‘-NA’ at the end of the code.
Example: X3-P16091E3L3F2F3G-NA

Technical Specifications

Melamine Faced Top, 30mm thick European E1 grade melamine faced particle board with impact resistant 2mm PVC edging.
Finishes are scratch and abrasion resistant with a minimum density of 620 kg/mc plus or minus 5%.

Membrane Pressed Top, 25mm thick European E2 grade medium density fibreboard with multiple radius edging.
Finishes are in 0.4mm thick thermofoil sheet resistant to light, staining, shock and scratch as per BS6250 requirement.

Compact Laminate Top, 12mm thick High Pressure Laminate with 28N impact resistant.
Finishes are waterproof, chemical resistant and no staining by 18 specified reagents as per International Standard ISO 4586-2.

A choice of ergonomically contoured or straight worksurfaces are available.

Tiles are in 20mm thick European E1 grade particle board.

Fabric Tiles are covered with fire resistance fabric, according to BS476 part 7 class 1 standard.

Glazing Tiles have an aluminum frame grade 6063 T5 2mm thick with a horizontal striped translucent shatterproof polycarbonate panel.

Aluminum Board Tiles are in 6mm thick plasticized aluminum compound board with an aluminum frame grade 6063 T5 2mm thick. Finishes are light weight, smooth, soundproof, fireproof, easy to clean, and corrosion resistant.
Metallic black and off-white as standard colour with choices of perforated or non-perforated tile.

Glass are either tempered or laminated for your safety.

Whiteboard, the writing surfaces are traditional white enamel on steel type.
A translucent white laminated glass version (6.38mm) is also available.

Vertical Posts are aluminum extruded, made from alloy grade 6063 with a tensile 5 level of hardening.
A uniformed thickness of 2mm is used on all structural elements. Surfaces are treated with a corrosion resistant anodizing layer of 10 microns or powder coated to a thickness of no less than 50 microns for increased durability, scratch and chemical resistance.

Height Adjustable die cast **clamping brackets** made from zinc alloy No. 3 are used for attaching all worksurface brackets together with **flipper bins and shelves**.

The **worksurface brackets** are made from 2.5mm thick cold rolled steel.

Plastic components are manufactured from nylon, POM and ABS for strength and durability.

Stack-on vertical post options can be used to increase the height of a panel by 35.5cm, e.g. 128cm high panel can have additional tile to make a 164cm height of panel. A **central slide-in bracket** is used to secure the stack-on vertical post.

Flipper bins are made from sheet steel 1mm and 1.5mm thick, welded together and includes an integral back panel. Flipper bin mechanism are hydraulically operated by two gas action springs. **Pivoting brackets** are mounted onto the curved door allowing the door to flip up and over the top. **Task lights** can also be fitted to all sizes. **Shelves** are 1mm thick steel with profiled front edges and 2.5mm thick end brackets. All **steel components** are manufactured in cold rolled steel.

Cable Management Channels provide large capacity wiring in optional height positions as well as vertical cable options. Cables can be accessed even after worksurfaces are in place. Two **steel tubes** provide the main structural beam between each end of the cable channel. They are rolled from 1.2mm thick steel and finished in powder coating. Adjustable **plastic cable managers** segregate the cable between the channel holding them neatly in position. **Power and data outlets** can be positioned either flush mounted on the outside of the cover or internally, using special quick to install plastic clip fixing brackets.

Pedestal are made from 18mm thick melamine faced chipboard constructed with both dowel and KD fittings. The **A4/Foolscap filing drawers** have full extension ball bearing slides while the shallow drawers have roller runner slides. **Mobile Pedestals** have an anti-tilt caster and all pedestals and flipper bins have quality German locks with removable inner cylinders and are master keyed up to 2000 different combinations.

Uplighting, the Luminaries have OSRAM ballasts rated 220V, powering twin OSRAM compact Fluorescent lamps or 55watts/4800 Lumen each.
